

This is a Conditional Flow Chart.

I am demonstrating within this flow chart, the process of counting 1 to 40 on one hand.

I will start the 1 to 20 count with the thumb and ending the count on the ring finger.

If the count is incorrect, I will restart the process again to get an accurate count that will end on the ring finger.

I place the 20 count into a storage data, so I would not loose my count.

I resume my count starting with 21 and ending at 40 on the first finger. If the count is incorrect, I will restart the process from the 21 count again to get an accurate count that will end on the first finger.

Key Codes:

First Finger = FF

Ring Finger = RF
